

## Secure Cell Phone Transaction Processing

### Are you Mobile?

*eProcessingNetwork* makes wireless transaction processing available at **swiped rates** through **Java®** and **Bluetooth™** enabled cell phones and PDAs. The **ePNMobile J2ME™ Credit Card Transaction Processing** Application can prompt for invoice number, gratuity, other charges, process the transaction in real-time, and show the transaction authorization number **right on the phone display**.

Bluetooth-Enabled MagStripe Reader / Printer  
with a BlackBerry® 8800™

### Merchant Benefits

- **Fraud Prevention:** Real-time credit card and check processing, get approval or decline response at time of sale.
- **Lower Cost:** Lower investment than dedicated wireless transaction processing units.
- **Swiped Rates:** Reduced rate with Card swipe transactions from credit card processors.
- **Real-Time Processing:** No chasing after customers for declined transactions.
- **Ease Of Use:** Less time consumption than voice authorization processing.
- **Reporting:** Online tracking and transaction reports.
- **Lower Overhead:** No personnel needed in the back room to do manual entry authorizations.
- **Multi-Function Device:** Phone, email, 2 way radio (walkie-talkie) and credit card/check terminal. The entire process is simple and convenient to use.

*eProcessingNetwork* offers reliable and secure credit card and check transaction processing services and professional support every step of the way.
